

AIDEN RHAA

AWS Cloud Engineer | Cloud Infrastructure | Cloud DevOps | Platform Engineering

Atlanta Metropolitan Area | 617-939-1648 | aidenrhacloud@gmail.com

Portfolio: manynames3.github.io/cloudresume | GitHub: github.com/manynames3 | LinkedIn: linkedin.com/in/aidenrhaa

PROFESSIONAL SUMMARY

AWS Cloud Engineer with a business-ownership and automation background, backed by a deep project-based cloud engineering portfolio across Terraform, GitHub Actions CI/CD, ECS Fargate, EKS/GitOps, Lambda/serverless, Python/FastAPI, Next.js, Docker, Cognito/JWT auth, OPA/Rego, observability, audit logging, and cost controls. Builds secure, production-style AWS systems with validation artifacts, test coverage, policy checks, runbooks, teardown discipline, public GitHub repos, and live demos. Brings operator-level ownership from running service businesses and translating real workflows into cloud architectures.

CLOUD ENGINEERING HIGHLIGHTS

- Validated a Terraform PR risk gate that models safer infrastructure change review with Terraform plan parsing, deterministic policy checks, sensitive-value redaction, blast-radius analysis, GitHub checks/comments, audit persistence, and approval-gated actions.
- Delivered a production-style ECS Fargate lead-intelligence API for real business workflow requirements using FastAPI, ALB, CloudFront/WAF, private RDS PostgreSQL via RDS Proxy, Secrets Manager, CloudWatch alarms, modular Terraform, tests, Checkov validation, and teardown documentation.
- Built a governed CloudOps AI control plane and EKS/GitOps platform portfolio spanning Cognito/JWKS auth, OPA/Rego policy decisions, Bedrock routing, DynamoDB audit/cache storage, OpenTelemetry traces, ArgoCD, External Secrets, Prometheus, Grafana, and tenant ALB ingress.

CERTIFICATIONS

AWS Certified Solutions Architect - Associate | AWS Certified Developer - Associate | HashiCorp Certified: Terraform Associate

TECHNICAL SKILLS

Cloud and AWS: VPC, IAM, ECS Fargate, EKS, Lambda, API Gateway, Step Functions, S3, S3 Vectors, DynamoDB, RDS PostgreSQL, RDS Proxy, Bedrock, Textract, Cognito, CloudFront, WAF, ALB, ECR, SQS, EventBridge, Transcribe, Rekognition, CloudWatch, CloudTrail, Secrets Manager, SSM, Cost Explorer
Infrastructure and CI/CD: Terraform, Terraform plan review, modular IaC, GitHub Actions, OIDC role assumption, Docker, Docker Compose, Cloudflare Pages, deployment pipelines, Checkov, TFLint, runbooks, ADRs

Containers and Platform: Kubernetes, Amazon EKS, ECS Fargate, Helm, ArgoCD, IRSA, External Secrets, Prometheus, Grafana, GitOps patterns, ALB ingress

Programming and Data: Python, TypeScript, JavaScript, React, Next.js, FastAPI, PostgreSQL, SQL, Bash, REST APIs, data pipelines

Security and Operations: least-privilege IAM, private subnets, security groups, OPA/Rego, JWT/Cognito auth, presigned S3 URLs, WAF/rate limiting, secrets management, audit logging, OpenTelemetry, approval gates, CloudWatch alarms, cost controls

CLOUD ENGINEERING PROJECT EXPERIENCE

Independent production-style AWS portfolio with public repos, live demos, validation artifacts, test coverage, security checks, runbooks, and teardown documentation.

Clearpath - AWS Fargate Lead Intelligence API

GitHub: github.com/manynames3/clearpath-fargate-api

- Delivered a production-style FastAPI lead-intelligence service for real business workflow requirements using ECS Fargate, Docker, ALB, CloudFront/WAF, private RDS PostgreSQL via RDS Proxy, Secrets Manager, CloudWatch, and modular Terraform.
- Improved lead analysis and data quality with provider/source scorecards, lead scoring, county resolution, workbook field mapping, dashboard views, and source/county performance APIs.
- Validated AWS readiness with 2 healthy Fargate tasks, healthy API/webhook target groups, CloudFront/WAF edge protection, CloudWatch alarms, 26 FastAPI tests, 339 passing Checkov checks, and a documented 93-resource teardown.

TerraGate - Terraform PR Risk Gate

GitHub: github.com/manynames3/terragate | Live Demo: terragate.hangi87.workers.dev/

- Built an AI-assisted Terraform PR review platform to model safer infrastructure change review using FastAPI, Next.js, PostgreSQL, LangGraph, Terraform plan JSON parsing, deterministic policy checks, GitHub checks/comments, and approval-gated actions.
- Implemented security, cost, reliability, and governance findings with sensitive-value redaction, blast-radius analysis, runbook checklist generation, audit persistence, Alembic migrations, Docker Compose, and GitHub Actions CI.
- Added guarded public-demo mode with sample Terraform plans, upload limits, sandbox disablement, mock GitHub writes, and documented Cloudflare Workers plus AWS API Gateway/Lambda deployment paths.

AegisDesk - Self-Hosted CloudOps AI Control Plane

GitHub: github.com/manynames3/aegisdesk-cloudops-control-plane | Live Demo: d27myiv7bbi1rz.cloudfront.net

- Built a live self-hosted CloudOps AI control plane on AWS to model incident triage, access requests, ticket workflows, and cost-review governance using Next.js, FastAPI, Cognito/JWKS auth, OPA/Rego, Bedrock routing, DynamoDB, AWS Cost Explorer, OpenTelemetry, MCP tools, and Terraform.
- Strengthened trust and auditability with request replay, answer provenance, trusted-source grounding, role-based policy decisions, redaction, audit trails, API throttling, quotas, and manual AWS deployment workflow.

Pulpit V2 - Validated EKS/GitOps Platform

GitHub: github.com/manynames3/pulpit-v2 | Live Demo: pulpit-v2.pages.dev/

- Validated an EKS/GitOps platform deployment with Terraform, ECR, Helm, ArgoCD app-of-apps, tenant namespaces, External Secrets backed by SSM, Prometheus, Grafana, tenant ALB ingress, and Cloudflare frontend integration.
- Captured runtime and teardown artifacts for a 2-node managed node group, ArgoCD-managed tenant workloads, kubectl state, Prometheus target discovery, and Grafana dashboards.

PROFESSIONAL EXPERIENCE

Founder / Automation & Systems Lead - Clearpath Property Group / Boston Probate Solutions

Dec 2016 - Present | Atlanta Metropolitan Area

- Owned acquisition and operations workflows across lead intake, public-records research, market data, CRM integration, seller communication, and technical automation.
- Automated county-record and property-document research with Python ingestion workflows that scraped, normalized, aggregated, and exported structured data for acquisition analysis.
- Improved lead qualification and follow-up consistency with webhook-driven CRM/API workflows, AI prompt orchestration, voice AI guardrails, intent capture, transcript summaries, and structured data handoff.
- Translated real business workflow requirements into the public Clearpath Fargate API project, documenting architecture, tests, AWS validation artifacts, and teardown workflow.

Creative Director / Operations - Aiden Rhaa Photography / Visual Impact Studios

Oct 2010 - Present | Atlanta Metropolitan Area

- Managed client-facing web properties and lightweight infrastructure, including DNS, SSL/TLS, Cloudflare, hosting, GitHub-based deployments, Supabase/Netlify workflows, cPanel, SFTP/SSH, and WordPress administration.
- Delivered 200+ client projects over 15 years while coordinating contractors, vendors, timelines, budgets, technical execution, and high-touch client communication.
- Built and maintained static/CMS websites focused on performance, SEO, image optimization, mobile responsiveness, and low operating cost.

Multimedia Producer / Technical Workflow Lead - ProMedia Productions

May 2009 - Dec 2016 | Boston, MA

- Managed full project lifecycle for audio and video production projects across small business, corporate, and education clients.
- Automated repetitive media-file sorting and renaming with a macOS Automator workflow using structured naming conventions.
- Designed custom recording studio configurations including acoustic treatment planning, noise reduction analysis, and equipment layout.

ADDITIONAL CLOUD PROJECTS

PhotoScribe AI - Governed Serverless Media Search

GitHub: github.com/manynames3/photoscribe-ai | Live Demo: photoscribe-ai.pages.dev/

- Built a serverless media search platform with React/TypeScript, Terraform, Lambda, API Gateway, private S3, S3 Vectors, Bedrock Nova/Titan, DynamoDB policy/audit tables, Cognito, SQS DLQ, CloudWatch alarms, and cost documentation.

Pulpit - Live Serverless Bedrock RAG Application

GitHub: github.com/manynames3/pulpit | Live Demo: pulpit.pages.dev/

- Built a live Korean-English sermon search application using Bedrock Nova/Titan, Lambda, API Gateway, Cognito, DynamoDB, S3, Terraform, Cloudflare Pages, GitHub Actions, cited answers, audit records, Bedrock Guardrails, and SSM SecureString secrets.

DocuFlow OCR - Serverless OCR Workflow

GitHub: github.com/manynames3/docuflow-ocr | Live Demo: docuflow-ocr.pages.dev/

- Built a serverless invoice-processing workflow using S3 presigned uploads, API Gateway, Step Functions, Textract, Python Lambda, DynamoDB job/audit tables, SQS DLQ, CloudWatch alarms, and Terraform.

FaceID - Private Event Gallery With Serverless Face Matching

GitHub: github.com/manynames3/faceid | Live Demo: faceid-8dc.pages.dev/

- Built a Cognito-protected private event-gallery app with API Gateway, Python Lambda, private S3, DynamoDB, Rekognition, Terraform, Cloudflare Pages, consent-attested guest intake, review gates, and owner-scoped delete flows.

Super Transcriber - Serverless Audio Transcription

GitHub: github.com/manynames3/super-transcriber | Live Demo: super-transcriber.pages.dev/

- Built a cost-first transcription app using Cognito, API Gateway, Lambda, S3 presigned uploads, Amazon Transcribe async jobs, EventBridge completion handling, DynamoDB job records, Terraform, React, and Cloudflare Pages.

Market Scout - Static Market Intelligence App

GitHub: github.com/manynames3/market-scout | Live Demo: market-scout-anl.pages.dev/

- Built a static market intelligence app using Python data pipelines, Redfin public market data, generated JSON artifacts, GitHub Actions scheduled builds, CSV export, and Cloudflare Pages.

EDUCATION

Berklee College of Music - Music / Songwriting, 2008-2011

Saint Louis University - Engineering Physics, 2006-2008
